

ADEMCO

DVR User Manual

For H.264 4/8/16-channel digital video recorder
All rights reserved

CAUTION

- Please read this user manual carefully to ensure that you can use the device correctly and safely.
- There may be several technically incorrect places or printing errors in this manual. The updates will be added into the new version of this manual. The contents of this manual are subject to change without notice.
- This device should be operated only from the type of power source indicated on the marking label. The voltage of the power must be verified before using. If the device doesn't work for a long time, pull out the plug from the socket.
- Do not install this device near any heat sources such as radiators, heat registers, stoves or other device that produce heat.
- Do not install this device near water. Clean only with a dry cloth.
- Place the device in a well-ventilated area.
- Do not power off the DVR at normal recording condition!
- This machine is indoor using equipment. Do not expose the machine in rain or moist environment. In case any solid or liquid get into the machine's case, please cut off the power supply immediately, and ask for qualified technicians to check the machine before restart
- Do not try to repair the device by yourself without technical aid or approval.
- When this product is in use, the relevant contents of Microsoft, Apple and Google will be involved in. The pictures and screenshots in this manual are only used to explain the usage of our product. The ownerships of trademarks, logos and other intellectual properties related to Microsoft, Apple and Google shall belong to the above-mentioned companies.
- This manual is suitable for 4/8/16-channel digital video recorders. All examples and pictures used in the manual are from 16-channel DVR.

Congratulations on your purchase of our DVR. The new DVR series is manufactured under stringent quality norms to ensure trouble free and reliable performance.

Please verify the package for the following contents

1. Digital Video Recorder
2. Power Supply Adaptor
3. Power Cord
4. USB Mouse
5. IR Remote Controller
6. Quick Setup Guide/Manual
7. SATA cable for connecting HDD
8. Software CD

Warranty

ADEMCO warrants that the new DVR will be free from defects in material and workmanship as per the standard warranty term.

If a defect is discovered, ADEMCO's sole obligation shall be to repair or replace the product(s) at its sole discretion, provided it is returned during the warranty period and that the fault is covered under warranty as per the standard warranty policy.

This warranty shall not apply to any product or any part of a product, which in the judgment of ADEMCO, has been subjected to misuse, negligence, alteration, accident, improper maintenance, or damage by excessive physical or electrical stresses. Tampering, such as opening the housing of the DVR or replacing parts will void this warranty. The warranty is void if the serial number of the ADEMCO product has been defaced, altered, or removed or if the product has been modified. All replaced parts or products become the property of ADEMCO.

The warranty is not applicable to:

- Abnormal wear and tear.
- Damage caused during installation.
- Damage caused by the equipment or system with which the DVR is used.
- Damage caused by modification or repairs not made or authorized by ADEMCO.
- Damage caused by improper packaging.
- Damage caused by lack of grounding protection.
- Merchandise that is determined to be stolen.
- Power supplies and accessories.

For any warranty related issue or further details, please contact your dealer, supplier or point of sale.

1 Introduction

1.1 DVR Introduction

This model DVR (Digital Video Recorder) is designed especially for CCTV system. It adopts high performance video processing chips and embedded Linux system. Meanwhile, it utilizes many most advanced technologies, such as standard H.264 with low bit rate, Dual stream, SATA interface, VGA output mouse supported, IE browser supported with full remote control, mobile view(by phones), etc., which ensure its powerful functions and high stability. Due to these distinctive characteristics, it is widely used in banks, telecommunication, transportation, factories, warehouse, and irrigation and so on.

1.2 Main Features

COMPRESSION FORMAT

- Standard H.264 compression with low bit rate and better image quality

LIVE SURVEILLANCE

- Supports HDMI/ VGA/BNC output
- Supports channel security by hiding live display
- Display the local record state and basic information
- Supports USB to make full control

RECORD MEDIA

- Supports one SATA HDD to record for a longer time without any limitation

BACKUP

- Supports USB 2.0 devices to backup
- Supports saving recorded files with AVI standard format to a remote computer through internet

RECORD & PLAYBACK

- Record modes: Manual, Schedule, Motion detection and Sensor alarm recording
- Supports recycle after HDD full
- Resolution, frame rate and picture quality are adjustable
- 4CH DVR supports 4 CH 960H real-time recording
- 8/16CH DVR supports 960H @12/15fps or D1/CIF @30 fps recording
- 4 audio channels available
- Three record search modes: time search, event search and image search
- 4/8/16-CH screen playback simultaneously
- Supports deleting and locking the recorded files one by one
- Supports remote playback in Network Client through LAN or internet

ALARM

- 1 channel alarm output and 4/8/16 channel alarm input available
- Supports schedule for motion detection and sensor alarm
- Supports pre-recording and post recording
- Supports linked channels recording once motion or alarm triggered on certain channel

- Supports linked PTZ preset, auto cruise and track of the corresponding channel

PTZ CONTROL

- Supports various PTZ protocols
- Supports 128 PTZ presets and 8 auto cruise tracks
- Supports remote PTZ control through internet

SECURITY

- Customize user right: log search, system setup, two way audio, file management, disk management, remote login, live view, manual record, playback, PTZ control and remote live view
- Supports 1 administrator and 63 users
- Supports event log recording and checking, events unlimited

NETWORK

- Supports TCP/IP, DHCP, PPPoE, DDNS protocol
- Supports NAT technology
- Supports IE browser to do remote view
- Supports QR CODE Scanning through mobile phone client
- Supports setup client connection amount
- Supports dual stream. Network stream is adjustable independently to fit the network bandwidth and environment
- Supports picture snap and color adjustment in remote live
- Supports remote time and event search, and channel playback with picture snap
- Supports remote PTZ control with preset and auto cruise
- Supports remote full menu setup, changing all the DVR parameters remotely
- Supports mobile surveillance by phones with iPhone & Android OS
- Supports CMS/NVMS to manage multi devices on internet

2 Hardware Installation

2.1 Install Hard Drive

Check the unit and the accessories after getting the DVR. Please don't power up the unit till the physical installation is complete.

Notice: 1. This series support one SATA hard drive. Please use the hard drive the manufacturers recommend specially for security and safe field.

2. Please calculate HDD capacity according to the recording setting. Please refer to "Appendix B Calculate Recording Capacity".

- ① Loosen and open the top cover and put four screws into the screw holes of the HDD.

- ② Put the HDD onto the bottom of the device and connect the power and data cables.

- ③ Turn over the device, push the HDD to the left and fix it, and then install back the top cover.

Note: For convenience installation, please connect the power and data cables first and then wind the screws to fix the HDD.

2.2 Front Panel Descriptions

Notice: The front panel descriptions are only for reference; please make the object as the standard.

Type	Name	Description
Work state indicator	Power	The power indicator turns blue when DVR is powered up.
	HDD	The light turns blue when HDD is writing and reading.
	Net	The light turns blue when it is able to access the network.
	Backup	The light turns blue when backing up files and data.
	Play	The light turns blue when playing video.
	REC	The light turns blue when recording.
Function button	MENU/+	1. Enter menu in live 2. Increase the value in setup
	BACKUP/-	1. Decrease the value in setup 2. Enter backup mode in live
	RECORD/FOCUS	1. Record manually 2. FOCUS function enables at PTZ mode.
	REW/SPEED	1. Rewind key 2. SPEED function enables at PTZ mode
	SEARCH/ZOOM	1. Enter search mode 2.ZOOM function enables at PTZ mode.
	PLAY /IRIS	1. Enter play interface 2. IRIS function enables at PTZ mode
	FF/ P.T.Z.	1. Fast forward 2. Enter PTZ mode in live.
Digital button	1-9	Input number 1-9 or choose camera.
	0/10+	Input number0, 10 and the above number together with other digital keys .
Input button	Direction button	Change direction to select items.
	Multi-screen	Change screen display mode like1/4/8 channel.
	Enter button	Confirm selection.
IR receiver	IR	For remote controller
USB	USB port	To connect external USB devices like USB flash, USB HDD for backup or update firmware; or connect to USB mouse.
POWER	POWER	Switch off

2.3 Rear Panel Instructions

Rear Panel for 4-ch

Rear Panel for 8-ch

Rear Panel for 16-ch

Name	Description
Audio in	4 CH Audio input
GND	Grounding
RS485	Connect to speed dome or keyboard
ALARM OUT	1-ch relay output. Connect to external alarm
ALARM IN	Connect to external sensor
Video in	Video input channels
HDMI port	Connect to high-definition display device
VGA port	VGA output, connect to monitor
LAN	Network port
USB port	Connect USB mouse or connect external USB devices
DC12V	POWER INPUT
Audio out	Audio output, connect to the sound box
Video out/CVBS	Connect to monitor
Spot out	Connect to monitor as an AUX output channel by channel. Video would be displayed without OSD

2.4 Connections

- Video Connections

Video Input: The interfaces of video inputs are BNC interfaces. The input signal is PAL/NTSC (1.0Vp-P, 75Ω).

Video Output: Supports BNC/VGA/HDMI video output. You can connect to monitor through these video output interfaces simultaneously or independently.

- Audio Connections

Audio Input: Connect to microphone, pickup, etc.

Audio Output: Connect to headphone, sound box or other audio output devices.

● Alarm Connections

Take 4 CH alarm inputs and 1 CH alarm output for example.

Alarm Input:

Alarm IN 1~4 are 4 CH alarm input interfaces. There are no type requirements for sensors. NO type and NC type are both available.

The way to connect sensor and the device is as shown below.

The alarm input is an open/closed relay. If the input is not an open/closed relay, please refer to the following connection diagram.

Alarm Output:

The way to connect alarm output device:

Pull out the green terminal blocks and loosen the screws in the alarm out port. Then insert the signal wires of the alarm output devices into the port of NO and COM separately. Finally, tighten the screws. Provided that the external alarm output devices need power supply, you can connect the power supply as per the following figures.

- PTZ Connection

B A
RS485

The RS485 interfaces are not only used to connect speed dome but also to connect keyboard.

The way to connect speed dome to the DVR:

Disconnect pluggable block from the RS-485 terminal block and then loosen the fixed screws from the pluggable block, insert signal cables into A and B port separately (A is TX+; B is TX-) and tighten the fixed screws. Next, connect pluggable block back into terminal block. Finally, connect the video cable of the speed dome to the video input interface of the DVR.

2.5 Remote Controller

It uses two AAA size batteries.

- ① Open the battery cover of the remote controller.
- ② Place batteries. Please take care the polarity (+ and -).
- ③ Replace the battery cover.

Remote Controller

Button	Function
REC	Record manually
Search	To go to search mode.
MEUN	To enter menu.
Exit	To exit the current interface.
ENTER	To confirm the choice or setup.
Direction button	To move cursor in setup
ZOOM	To zoom in
PIP	To set picture in picture
▶▶▶▶	To control playback. Play/Pause/Stop/Previous
■◀◀◀◀	Section/Next Section/Rewind/Fast Forward
Multi	To choose multi screen display mode.
Next	To switch between single picture and picture group
SEQ	To go to auto dwell mode
INFO	Get information about DVR like firmware version, HDD information

Key points to check in case the remote doesn't work.

1. Check batteries polarity.
2. Check the remaining charge in the batteries.
3. Check IR controller sensor for any masking.
4. Check the ID of the remote with respect to the DVR.

If it still doesn't work, please change a new remote controller to try, or contact your dealers.

2.6 Control with Mouse

2.6.1 Connect Mouse

It supports USB mouse through the ports on the rear panel.

If mouse is not detected or doesn't work, check below steps:

1. Make sure the mouse is plugged in the USB mouse port.
2. Try with a good know mouse.

2.6.2 Use Mouse

During live:

Double-click on any camera window to see the full screen. Double-click again to return to the previous screen.

Right click to reveal the control menu on the screen. Right click again to hide the menu.

In Configuration:

Click to enter a particular option. Right click to cancel the option or to return to the previous menu.

In order to input a value in a particular screen, move cursor to the input box and click. An input window will appear. It supports digits, alphabets and symbols input. Click "Shift" button to input Capital letters and symbols; click "Shift" button again to return.

It supports mouse drag. Take setting up motion detection area for example: Click customized, hold down the left button and drag to set motion detection area.

Digital Numbers and Letters Input Window

In Playback:

Click to choose the options. Right click to return to live mode.

In Backup:

Click to choose the options. Right click to return to previous picture.

In PTZ Control:

Click left button to choose the buttons to control the PTZ. Click right button to return to live.

Note: Mouse is the default tool for all operations unless an exception, as indicated.

3 Basic Function Instruction

3.1 Power On/Off

Before you power on the unit, please make sure all the connection is good.

3.1.1 Power On

- ① Connect with the power.
- ② The device will boot and the power LED would turn blue.
- ③ A WIZZARD window will pop up and show some information about time zone, time setup, network configuration, record configuration and disk management. User can set up here and refer to the concrete setup steps from the corresponding chapters. If users don't want to set Wizard, please click "Exit" button to exit. Press and hold FN/ESC key to switch the resolution of the BNC and VGA/HDMI output.

3.1.2 Power Off

User can power off the device by using remote controller, keyboard or mouse.

- ① Go to Main Menu and then select "Shut Down" icon to pop up the Shut down window.
- ② Click OK. Then the unit will power off after a while.
- ③ Disconnect the power.

3.2 Login

User can login or log off the DVR system. Once logged off the user cannot do any other operation except changing the multi-screen display.

Fig 3-1 Login

Notice: The default user name is **admin** and the default password is **123456**. For complete operational steps for changing password, adding or deleting users, please refer to section 4.7 User Management Configuration.

3.3 Live Preview

Fig 3-2 Live Preview Interface

Symbol	Meaning
Green	Manual record
Yellow	Motion detection record
Red	Sensor Alarm record
Blue	Schedule record

3.4 Live Playback

Click Playback  button to playback the record. Refer to Fig 3-3. User can do complete operation by clicking the buttons on screen.

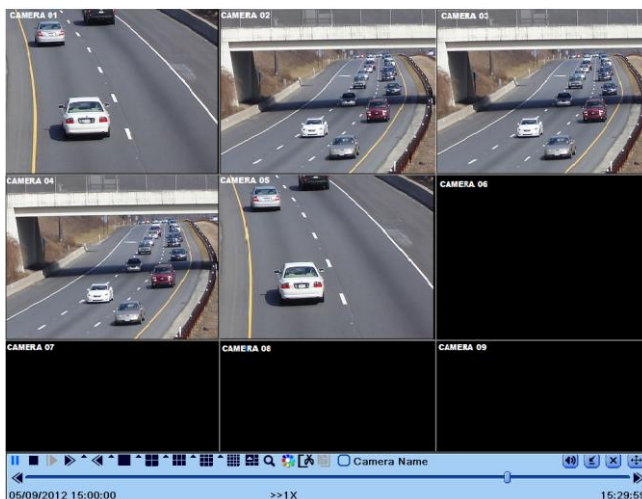

Fig 3-3 Live Playback

4 Main Menu Setup Guide

Click right mouse or press ESC button on the front panel and then the control bar will display at the bottom of the screen. Refer to Fig 4-1.

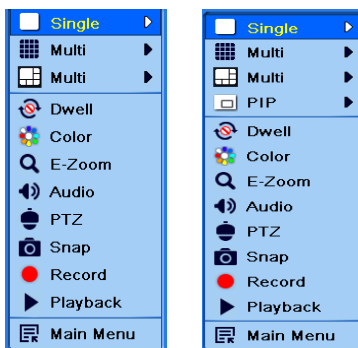

Fig 4-1 Main Menu Toolbar

Single: Choose a channel from the list to be displayed in the full screen mode.

Multi: Choose the display mode for viewing multiple channels.

PIP: Click Single button to choose the bigger picture. Then right click to display the menu toolbar to see PIP button. Click this button to choose the small picture.

Dwell: Dwell means to display live images from different cameras in a sequence. The images may be displayed as a single channel or in a grid fashion from different cameras. Dwell mode is enabled only when the chosen display mode is not able to display all the available cameras.

Color: If this button is enabled, you can adjust the color of live pictures.

E-Zoom: Single channel large screen electronic amplification.

Audio: Enable sound.

PTZ: Click the PTZ button to control rotation position, speed and auto scan of the PTZ.

Snap: Click this button to snap the live pictures. These pictures will automatically be saved in the SATA disk.

Record: Click this button to start/stop recording.

Playback: Click this button to playback the record files.

Click Main Menu button to pop up a window as Fig 4-2. You can also press MENU button on the front panel or operate with remote controller to display the main menu. Clicking Setup icon will pop up the configuration menu:

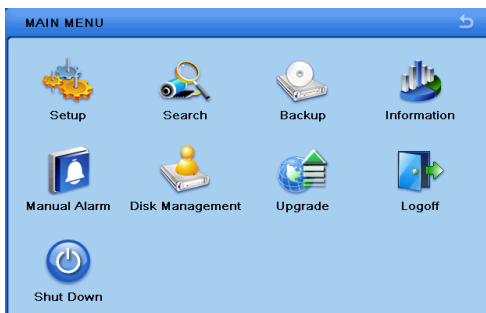

Fig 4-2 Setup

4.1 Basic Configuration

Basic configuration includes three sub menus: system, date & time and DST.

4.1.1 System

- ① Go to Main Menu→Setup→Basic →System interface. Refer to Fig 4-3.

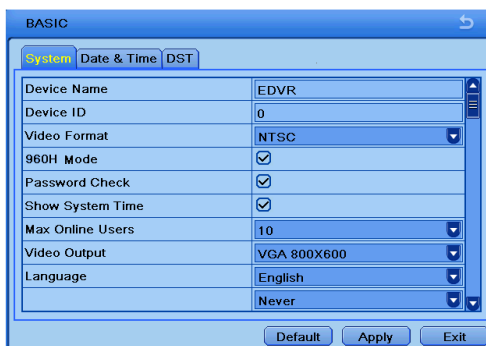

Fig 4-3 Basic Configuration-System

- ② In this interface you can set up the device name, device ID, video format, max network users, VGA resolution, language and so on. The definitions for every parameters display as below:

Device Name: The name of the device. It may display on the client end or CMS that help user to recognize the device remotely.

Device ID: This ID is used to map the speed dome cameras.

Video Format: Two modes: PAL and NTSC. User can select the video format according to that of camera.

960H Mode: This function is only applicable for 8/16 CH DVR.

Password Check: If this option is enabled, the user would need to input the user name and the password for performing corresponding operations.

Show System Time: If selected, the current time will be displayed during live monitoring.

Max Online Users: To set the max number of concurrent user logins in the DVR.

Video Output: The resolution of live display interface, range from: VGA800*600, VGA1280*1024 and HDMI.

Language: Setup the menu language.

Note: After changing the language and video output, the device needs to login again.

Logout After (Minutes): A user can set up the screen interval time (30s, 60s, 180s, 300s). If there is no any operation within the setting period, the device will auto logout and return to login interface.

Show Wizard: If selected, the GUI would launch the startup wizard on every boot, allowing the user to do basic setup.

No Image When Logout: If selected, there will be no image showing when logging out.

Adjust CVBS video out: If selected, the device needs to login again for adjusting CVBS video output automatically.

4.1.2 Date & Time

- ① Go to Main Menu→Setup→Basic →Date & Time interface. Refer to Fig 4-4.

Fig 4-4 Basic Configuration-Date & Time

- ② Set the date format, time format, time zone in this interface; checkmark “sync time with NTP server” to refresh NTP server date. You can also adjust system date manually.
- ③ Click “Apply” button to save the setting.

4.1.3 DST

- ① Go to Main Menu→Setup→Basic →DST interface. Refer to Fig 4-5.
- ② In this interface, enable daylight saving time, time offset, mode, start & end month/week/date, etc.
- ③ Click “Apply” button to save the setting.

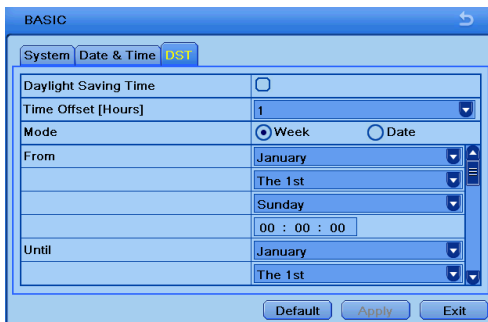

Fig 4-5 Basic Configuration-DST

4.2 Live Configuration

Live configuration includes four submenus: live, main monitor, spot and mask.

4.2.1 Live

In this interface, you can set up camera name and adjust colors.

To set up camera name:

- ① Go to Main Menu→Setup→Live→Live. Refer to Fig 4-6.

Fig 4-6 Live Configuration-Live

- ② A software keyboard will pop up by clicking camera name area. Click the letters and (or) digital numbers on the keyboard to input the name you want to display in live image.
- ③ Checkmark the camera name in the show name area. All channels will show the camera name by checking “All” checkbox.
- ④ Click “Apply” to save the setting.

To set up color:

- ① Click “Setting” button for a particular camera/channel to see a window as Fig 4-7.
- ② In this interface, you can adjust brightness, hue, saturation and contrast in live. Click

“OK” button to save the setting.

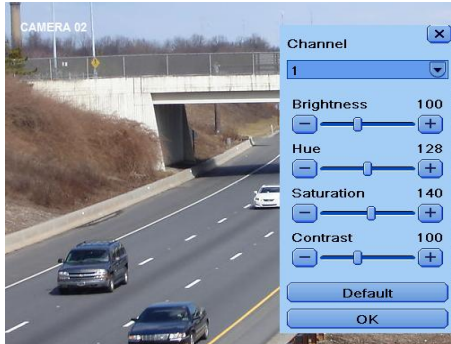

Fig 4-7 Live-Color Adjustment

4.2.2 Main Monitor

The main monitor settings allow you to set camera sequence in live display mode. Operate the following steps to set main monitor:

- ① Go to Main Menu→Setup→Live →Main Monitor interface. Refer to Fig 4-8.

Fig 4-8 Live Configuration-Main Monitor

- ② Select display mode and channel.
- ③ Select dwell time. Click  button to set up the previous channel groups of dwell picture. Click  button to set the latter channel groups of dwell picture.
- ④ Click “Apply” to save the setting.

4.2.3 Spot

- ① Go to Main Menu→Setup→Live→Spot. Refer to Fig 4-9.

Fig 4-9 Live Setup-Spot

- ② Select Display Mode: 1×1 and map the channel.
- ③ Set the dwell time. Click  button to set the previous channel, click  button to set the latter channel.
- ④ Select the display mode and setup current picture group.
- ⑤ Click “Apply” button to save the settings.

4.2.4 Mask

If there is something you don't want to display in the live image. You can set mask. For a given channel a maximum of three areas can be masked.

To set up mask area:

- ① Go to Main Menu→Setup→Live →Mask interface.

Fig 4-10 Live Configuration-Mask

- ② Click “Setting” button to go to live image.
- ③ Press and drag the left mouse button to set mask area as shown below.
- ④ Right click to exit the mask setting interface.
- ⑤ Click “Apply” button to save the setting.

To delete mask area

- ① Click “Setting” button in the mask interface.
- ② Select a certain masked area and double click to delete that masked area.
- ③ Then click “Apply” button to save the setting.

Setup Mask Area

4.3 Record Configuration

Record configuration includes six sub menus: enable, record bit rate, time, recycle record, stamp and snap.

Before Configuration, please make sure your DVR has been installed with HDD and has completed its initialization.

4.3.1 Enable

- ① Go to Main Menu→Setup→Record→Enable interface. Refer to Fig 4-11.

Fig 4-11 Record Configuration-Enable

Parameter	Meaning
Record	To enable/disable recording for the channel
Audio	To enable/disable audio recording for the channel

- ② Checkmark record and audio.
- ③ Select “All” to set up the same settings for all channels.

4.3.2 Record Bitrate

- ① Go to Main Menu→Setup→Record →Record Bitrate. Refer to Fig 4-12.
- ② Set up rate, resolution, quality, encode and max bit stream.
- ③ Select “All” to set the same settings for all channels.
- ④ Click “Apply” button to save the setting.

Fig 4-12 Record Configuration-Record Bitrate

Parameter	Meaning
Rate	Range from 1-25/30 (related to the resolution you choose)
Resolution & Rate	Supports WD1, D1, HD1 and CIF
Quality	The higher the value is, the clearer the recorded image is. Six options: lowest, lower, low, medium, higher and highest.
Encode	VBR and CBR
Max bit stream	Range from: 768~2560kbps

If 960H Mode is checked in 8/16 CH DVR, WD1, D1, HD1 and CIF resolution can be selected and the maximum number of frame you can choose is 12(PAL)/15(PAL).

If 960H Mode isn't enabled in 8/16 CH DVR, the resolution option includes D1, HD1 and CIF and the maximum number of frame you can choose is 25(PAL)/30(PAL).

4.3.3 Time

- ① Go to Main Menu→Setup→Record → Time interface to set recording time. Refer to Fig 4-13.
- ② Set Pre-alarm record time and post-alarm record time. Select “All” to set the same settings for all channels.

Pre-alarm Record Time: Set the time in seconds to pre-record before the actual recording begins.

Post-alarm Record Time: Set the time in seconds to post-record after the actual recording has finished, five options: 10s, 15s, 20s, 30s, 60s, 120s, 180s and 300s.

Expire Time: Set the expiration time for recorded video. If the set date is overdue, the recorded files will be deleted automatically.

- ③ Click “Apply” to save the setting.

Fig 4-13 Record Configuration-Time

4.3.4 Stamp

This provides an option to enable or disable the Camera Name and the Time stamp on the video. The user can also choose a position for the stamp on the screen.

To set up stamp as follows.

Fig 4-14 Record Configuration-Stamp

- ① Go to Main Menu→ Setup→Record→Stamp interface. Refer to Fig 4-14.
- ② Checkmark camera name and time stamp. Click Setting button to set up the position of the stamp. You can drag the camera name and time stamp at random positions. Refer to below Figures.

Before drag

After drag

- ① Select “All” to set up all channels with the same parameters.

4.3.5 Recycle Record

This option is used to recycle the HDD space once it is full. If enabled, the system will automatically delete the old records and recycle the space if it is completely utilized. The setting steps are as follows:

- ① Go to Main Menu→Setup→Record →Recycle Record interface.
- ② Checkmark recycle record to activate auto recycling. If the option is disabled or not selected, the DVR would stop recording once HDD is full.
- ③ Click “Apply” button to save the setting.

4.3.6 Snap

In this interface, user can set up Resolution, quality, snap interval, snap number.

4.4 Schedule Configuration

Schedule configuration includes three sub menus: schedule, motion and sensor.

4.4.1 Schedule

This tab allows defining schedule for normal recording for seven days of a week, 24 hours of a day. Every row denotes an hourly timeline for a day. Click the grid to do relevant setup. A highlighted area denotes selected timeline. Operate the following steps to set schedule:

- ① Go to Main Menu→Setup→Schedule→Schedule interface. Refer to Fig 4-15.
- ② Select channel and click “” button to add a certain day schedule. Click “” button to delete the selected schedule.

If you want to apply the schedule setting of a certain channel to other or all channels, you need to select channel and click “Copy” button.

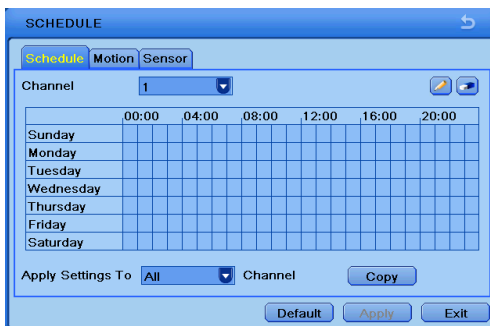

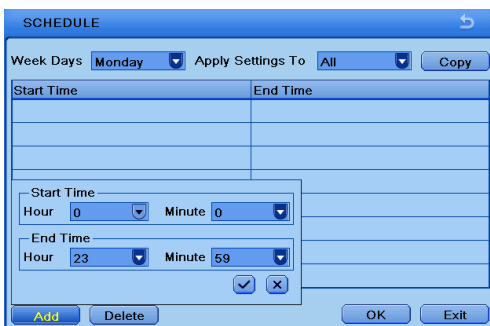

Fig 4-15 Schedule Configuration-Schedule

You can also set week schedule by double-clicking in the grinding area. This will take you to see a dialog box as below.

- ① Select a day and click “Add” button to schedule start time and end time. Then click to save.
- ② Select other days and add schedule or copy settings from one schedule to the others under the Apply Settings To item.

Schedule-Week Schedule

4.4.2 Motion Schedule

This tab allows to set schedule for motion based recording. The setting steps are as follows:

- ① Go to Main Menu→Setup→Schedule →Motion tab.
- ② The setup steps for schedule for motion based recording are similar to normal schedule setup. You can refer to 4.4.1 Schedule for details.

Note: The default schedule of motion based recording is 24 x 7. If you want to activate motion based recording, you must enable motion alarm and set up schedule for motion alarm (see Chapter 4.5.2 Motion Alarm for more details).

4.4.3 Sensor Schedule

This tab allows to set schedule for sensor based recording. The setting steps are as follows:

- ① Go to Main Menu→Setup→Schedule→Sensor interface.
- ② The setup steps for schedule for sensor based recording are similar to normal schedule setup (see Chapter 4.4.1 Schedule for details).

Note: The default schedule of sensor based recording is 24 x7. If you want to activate sensor based recording, you must enable sensor alarm and set up schedule for sensor alarm (see Chapter 4.5.1 Sensor Alarm for more details).

4.5 Alarm Configuration

Alarm configuration includes five sub menus: sensor, motion, video loss, other alarm and alarm out.

4.5.1 Sensor Alarm

Sensor includes three sub menus: basic, alarm handling and schedule.

Operate the following steps to configure sensor alarm:

- ① Go to Main Menu→Setup→Alarm →Sensor→Basic interface. Refer to Fig 4-16.

Fig 4-16 Alarm Configuration-Sensor-Basic

- ② Enable channels by checking the checkboxes beside the desired channels.
- ③ Set the alarm type according to triggered alarm type. Two options: NO and NC.
- ④ Click “Apply” button to save the setting.
- ⑤ Go to Alarm Handling tab. Refer to Fig 4-17. Select hold time and then click “Setting” button to pop up a dialog box as shown in Fig 4-18.

Fig 4-17 Alarm Configuration-Sensor-Alarm Handling

- ⑥ Go to alarm tab to select the options to handle alarm.

Fig 4-18 Alarm Handling-Trigger

Buzzer: If selected, the local buzzer would be activated on an alarm.

Show Full Screen: If selected, there will pop up the chosen channel on the monitor on an alarm trigger.

To Alarm out: If selected, this would trigger the external relay output on detecting a sensor based alarm.

Email: If selected, the DVR will send an email alert to the preconfigured email address in case of a sensor based alarm from the particular input.

Snap: If selected, the system will snap images of the checked channels on an alarm and save them in the HDD automatically.

- ⑦ Go to To Record tab. Select recording channels. It would be recorded in case of an alarm. Click OK button to save the setting.
- ⑧ Go to To PTZ tab. Set preset, cruise and track options for a PTZ in case of a sensor based alarm. Single or multiple PTZ units could be programmed to perform this function on the same alarm.
- ⑨ Go to Schedule tab. The setting steps for schedule for sensor based alarm are similar to normal schedule setup. You can refer to 4.4.1 Schedule for details. This step is very

important for sensor alarm. Even if you have enabled the sensor alarm for all channels and set up the trigger, you will not see the result of sensor alarm if no schedule is added.

If you have set schedule for sensor based recording in the same timeline, recordings can also be triggered.

4.5.2 Motion Alarm

Motion includes two sub menus: motion and schedule. The steps to set motion alarm are as follows:

- ① Go to Main Menu→Setup→Alarm →Motion. Refer to Fig 4-19.

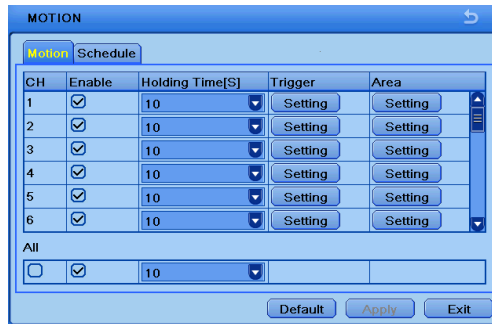

Fig 4-19 Alarm Configuration-Motion

- ② Enable motion alarm, set alarm hold time which refers to the time till which the system will wait for further detection of motion. e.g. If the holding time is set to 10 seconds, once the system detects a motion, it will go to alarm but would not detect any other motion alarm (specific to channel) until 10 seconds. If there is other motion detected during this period it is considered it as continuous movement, otherwise it will be considered as a single motion.
- ③ The setup steps of motion trigger are similar to “Alarm Handling” (See Chapter 4.5.1 Main Menu→Setup→Alarm →Sensor →Alarm Handling setting for more details).
- ④ After clicking Area button, a dialog box will pop up as Fig 4-20.
- ⑤ In the Area interface, you can drag slide bar to set the sensitivity value (1-8). The higher the value is the more sensitive it is to motion. Since the sensitivity is influenced by color and time (day or night), you can adjust its value according to the practical conditions. Left click the grid and drag to delete area. Click  icon to set the whole area as detection area. Click  icon to clear the set detection area. Click  icon to test the sensitivity as per the local conditions. Once motion is sensed, it displays a figure icon. Click  icon, to save the setting. Click  icon to exit the current interface.

Fig 4-20 Motion-Area

Note: Prior to setting motion detection field it is recommended that you click  icon to clear the existing field and set afresh.

- ⑥ Select “All” to set the same settings for all channels.
- ⑦ Click “Apply” button to save the setting.
- ⑧ Go to Schedule tab. The setting steps for schedule for motion based alarm are similar to normal schedule setup (see Chapter 4.4.1 for more details).

4.5.3 Video Loss

This DVR can be set up to detect video loss. The setting steps are as follows:

- ① Go to Main Menu→Setup→Alarm →Video Loss. Refer to Fig 4-21.
- ② The setup steps of video loss trigger are similar to “Alarm Handling” (See Chapter 4.5.1 Main Menu→Setup→Alarm →Sensor →Alarm Handling setting for more details).

Fig 4-21 Alarm Configuration-Video Loss

4.5.4 Other Alarm

This tab gives a choice to configure alarm for Disk Full, IP Conflict, the Disconnect event, Disk Attenuation or Disk Lost.

Go to Main Menu → Setup → Alarm → Other Alarm. Refer to Fig 4-22.

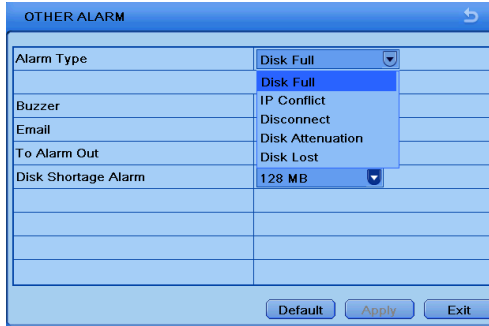

Fig 4-22 Alarm Configuration-Other Alarm

- ① Use the dropdown menu and select the event or the alarm.
- ② Check the required trigger options. If the selected event is “Disk Full”, then use the drop down box for “Disk Shortage Alarm” to choose a threshold value for remaining HDD space. If the threshold value is reached, the system will trigger the Disk Full Alarm.
- ③ Click “Apply” to save the setting.

4.5.5 Alarm Out

Alarm out includes three sub menus: alarm out, schedule and buzzer.

To set up alarm out:

- ① Go to Main Menu → Setup → Alarm → Alarm Out. Refer to Fig 4-23.

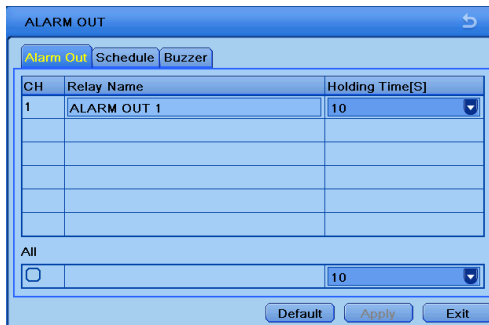

Fig 4-23 Alarm Configuration-Alarm Out

- ② Input relay name and select hold time.
- ③ Go to Schedule tab. This will go into schedule setup interface. The setting steps for schedule for alarm out are similar to normal schedule setup (see Chapter 4.4.1 for details).

This step is very important for alarm out. Even if you have enabled alarm out in the motion

based alarm or sensor based alarm, you will not see the result of alarm out if no schedule is added here.

To set up buzzer:

- ① Go to Main Menu→Setup→Alarm →Alarm Out →Buzzer.
- ② Checkmark Buzzer and set buzzer alarm hold time. This would trigger the buzzer when the system is on an alarm.

4.6 Network Configuration

Network configuration includes six submenus: network, sub stream, email, server, NAT and other settings. Network settings must be configured if DVR is used for monitoring over network.

4.6.1 Network

To set up network:

- ① Go to Main Menu→Setup→Network→Network tab. Refer to Fig 4-24.

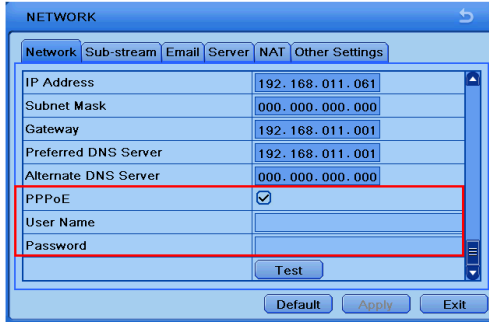

Fig 4-24 Network Configuration-Network

- ② Set HTTP port. The default HTTP port is 80. If the value is changed, you shall add the port number when typing IP address in IE address blank. e.g. If HTTP port is set to 82 and IP address is http://192.168.0.25, you should input the following IP address: http://192.168.0.25:82 into IE browser. Set server port. The default server port is 6036.
- ③ Connect internet. There are three ways to connect internet.
 - If you have a DHCP server running and would like your DVR to automatically obtain an IP address and other network settings, check the checkbox beside “Obtain an IP address automatically”. Then the device will distribute IP address, subnet mask, and gateway IP and DNS server.
 - If you want to configure your own settings, disable “Obtain an IP address automatically” item and input the IP address, subnet mask, gateway IP and DNS server.
 - If you connect internet through PPPoE, disable “Obtain an IP address automatically” item and check PPPoE checkbox and then enter username and password. Once the setup

- is completed, your DVR will automatically dial up into your network.
- ④ Test the effectiveness of the network by clicking “Test” button after you set the network.
- ⑤ If the network is well connected, please click “Apply” button to save the setting.

4.6.2 Sub Stream

To set up sub stream:

- ① Go to Main Menu → Setup → Network → Sub Stream interface. Refer to Fig 4-25.

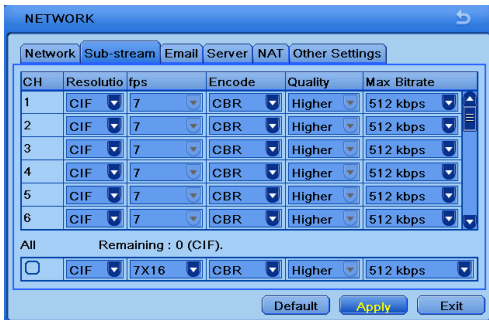

Fig 4-25 Network Configuration-Sub Stream

Parameter	Meaning
FPS	Frames per second.
Resolution	Support CIF.
Quality	The quality of the clients' image. The higher the value is, the clearer the record image. Six options: lowest, lower, low, medium, higher and highest.
Encode	VBR and CBR.
Max bit rate	Range from: 31~768kbps.

- ② S
elect fps, resolution, quality, encode and max bit rate.
- ③ Select “All” to set the same settings for all channels.

4.6.3 Email

To set up Email:

- ① Go to Main Menu→Setup→ Network→Email interface. Refer to Fig 4-26.
- ② Set SMTP Server and port.
- ③ Set sender's address and password.
- ④ Set receiver's email address and click "Test" button to test the validity of the mailbox.

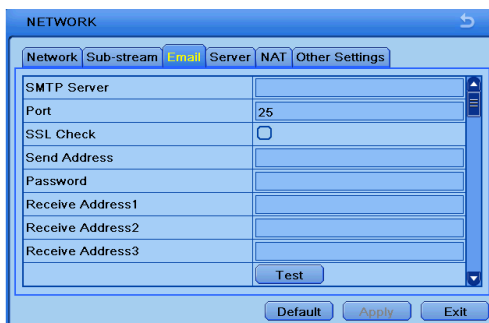

Fig 4-26 Network Configuration-Email

SMTP Server/Port: The name and port number of SMTP server. You can set up SSL check (such as Gmail) according to actual needs.

Attaching image: If selected, the system will attach images when sending emails.

4.6.4 Server

This function is mainly used for connecting ECMS/NVMS. The setting steps are as follows:

- ① In the server interface, select "Enable" as shown in the Fig 4-27.

Fig 4-27 Network Configuration-Server

- ② Check the IP address and port of the transfer media server in the ECMS/NVMS. The default server port for auto report is 2009. If it is modified, please go to the transfer media interface to check.

- ③ Enable the auto report in the ECMS/NVMS when adding a new device. Then input the remaining information of the device in the ECMS/NVMS. After that, the system will auto allot a Device ID. Please check it in the ECMS/NVMS.
- ④ Input the above-mentioned server IP, server port and device ID in the server interface. Then click “Apply” button to save the setting. Now, the ECMS/NVMS system will automatically connect this device.

4.6.5 NAT

- ① Go to Main Menu→Setup→ Network→NAT interface. Refer to Fig 4-28.
- ② Enable NAT and input the NAT Server (The default NAT Server is www.autonat.com).
- ③ Click “Apply” to save the settings.

Fig 4-28 Network Configuration-NAT

4.6.6 Other Settings

If your DVR is set to use PPPoE as its default network connection, you may set up DDNS to be used in connection. The setting steps are as follows:

- ① Enable DDNS server and select DDNS server.
- ② Enter user name, password and host domain name of the registered website.
- ③ Click “Test” button to test the effectiveness of the relevant information.

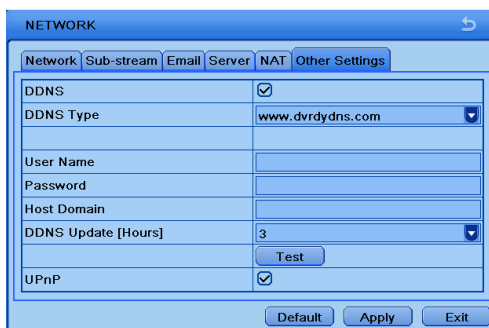

Fig 4-29 Network Configuration-Other Settings

- ④ Click “Apply” button to save the setting.

***Note:** The domain name selected by user is a banding domain name of DVR. User should logon the website which provided by the server supplier to register a user name and password and then apply for a domain name online. After the successful application, user can access the device from the IE client by inputting that domain name.*

Enable UPnP: Select UPnP here and then enable UPnP function in your router. Therefore, there is no need for you to forward LAN IP address and port in the router in connection of internet. After that, you can check the WAN IP address in the router.

➤ **Domain name Registration** (Take www.dvrddns.com for example)

- ① Input www.dvrddns.com in the IE address bar to visit its website. Then click “Registration” button to register as shown below.

- ② Create domain name.

You must create a domain name to continue.

Domain name must start with (a-z, 0-9). Cannot end or start, but may contain a hyphen and is not case-sensitive.

. [dvrddns.com](#) Request Domain

- ③ After you successfully request your domain name, you will see your domain in the list.

➤ DVR Setting

Connect DVR to the Network Client.

- ① Go to Main Menu→Setup→Network→Other Settings, checkmark DDNS, select “dvrdydns” at the DDNS Sever pull down list box and input user name and password.
- ② Go to configuration interface of the router to map the server port and IP address (if the user enables UPnP function, he can skip this step). Click “Save” button to save the setting.
- ③ Login IE browser and input registered domain name “http://www.xxx.dvrdydns.com”, connect to DVR client.

You can also quickly register the domain name in this interface.

- ① Set the IP address manually in the network tab and then click “Other Settings” tab. Check “DDNS”.
- ② Select “www.autoddns.com” in DDNS Type column as shown above.
- ③ Enter the host name at random, like 123.
- ④ Click “Register” to register the domain name. When the successful prompt pops up, it means you successfully register your domain name.

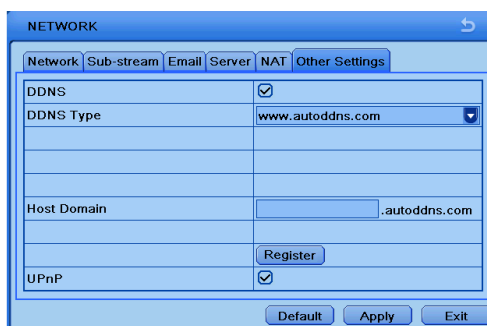

Fig 4-30 User Network Configuration-Other settings

DDNS server	
DDNS server	Website provided by dynamic domain name supplier. The optional: www.meibu.com, www.dyndns.com, www.no-ip.com, www.dvrdydns.com, and mintdns type.
User name	User name for log in the website of domain name supplier.
Password	Password for log in the website of domain name supplier.
Host domain	The domain name user registered at the supplier's website.
Update interval	The interval time of upgrading DVR IP address.

4.7 User Management Configuration

This tab allows you to add normal or advanced users. To add user and set up user authority:

- ① Go to Main Menu→Setup→Users. Refer to Fig 4-31.

Fig 4-31 User Management Configuration

- ② Click “Add” button to display a dialog box as Fig 4-32.

Fig 4-32 Add-General

- ③ In General tab, input username, password and select user type. You can also check “Binding PC MAC Address” and input this address.
- ④ Click “OK” to save the setting.

Note: When the default value of binding PC MAC Address is 0, the user is not bound with the specified computer. If the bind option is used, the user would be able to log in the DVR only through the specific computer (carrying the MAC address).

- ⑤ Select “Authority” tab and then assign the operation rights for particular user. Refer to Fig 4-33.
- ⑥ Click “OK” to save the setting.

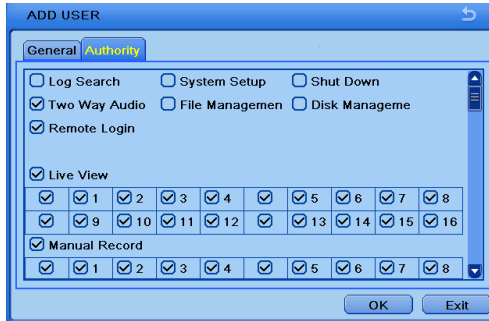

Fig 4-33 Add User-Authority

To delete user:

- ① Go to Main Menu→Setup→Users interface.
- ② Select the added user you want to delete and then click “Delete” button.

To modify user:

- ① Go to Main Menu→Setup→Users interface.
- ② Select the added user you want to modify and then click “Modify” button to do the relevant operation.

To change user password:

- ① Go to Main Menu→Setup→Users interface.
- ② Select the added user you want to change its password and then click “Change Password” button.

4.8 P.T.Z Configuration

P.T.Z configuration includes two submenus: serial port and advanced.

Serial port settings are as follows:

- ① Go to Main Menu→Setup → P.T.Z →Serial Port interface. Refer to Fig 4-34.

Fig 4-34 P.T.Z Configuration-Serial Port

- ② Select “Enable” and set up the value of address, baud rate and protocol according to the settings of the speed dome.
- ③ Select “All” to set the same settings for all channels.

Parameter	Meaning
Address	The address of the PTZ device.
Baud rate	Baud rate of the PTZ device. Range form: 110, 300, 600, 1200, 2400, 4800, 9600, 19200, 34800, 57600, 115200, 230400, 460800, 921600.
Protocol	Communication protocol of the PTZ device. Range from: NULL, PELCOP, PELCOD, LILIN, MINKING, NEON, STAR, VIDO, DSCP, VISCA, SAMSUNG, RM110, HY, N-control.
Simulative Cruise	If enabled, no matter whether the PTZ device supports cruise or not, the presets will cruise.

Advanced settings include preset setting, cruise setting and track setting. Go to Main Menu → Setup → P.T.Z → Advanced. Refer to Fig 4-35.

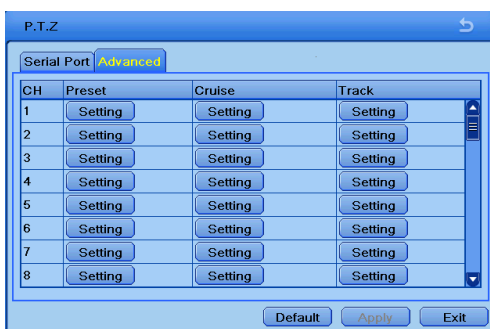

Fig 4-35 P.T.Z configuration-advanced

To set up preset:

- ① In the Advanced interface, click preset “Setting” button to see a dialog box as Fig 4-36.

Fig 4-36 Advanced-Preset Setting

- ② In the preset setting tab, enable preset, set the preset name and then click preset “Setting” button.
- ③ Control the dome by rotating up, up left, down, right down, left, left down, right and up right and adjust the rotate speed and the value of zoom, focus and iris of the dome.
- ④ Select the serial number of the preset point. Click  button to enable the PTZ wiper and click  button to enable the PTZ light.
- ⑤ Click “Save” button to save the setting. Click  icon to hide the tool bar. Right click to view this bar again. Click  icon to exit the current interface.
- ⑥ Return to the Advanced-Preset Setting interface and click OK button to save the setting.

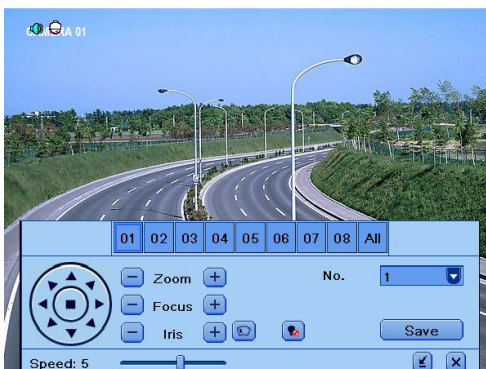

Fig 4-37 Preset Setting

Note: PTZ must support wiper and light button and these two buttons are just available when selecting PELCOP or PELCOD.

To set up cruise:

- ① In the Advanced interface, click cruise “Setting” button to see a window in Fig 4-38.

Fig 4-38 Cruise Setting

- ② Click Add button to add cruise line in the list box (8 cruise lines can be added at most).
- ③ Select a cruise line and click “Setup” button to see a dialog box as Fig 4-39.
- ④ Click “Add” icon  to set the speed and time of preset point. Select a preset point and then click Delete icon  to delete that preset point. Click Modify icon  to modify the setting of a preset point. User can click     those icons to adjust the position of preset point. Click “Preview” button to preview the cruise line. Click “OK” button to save the setting.

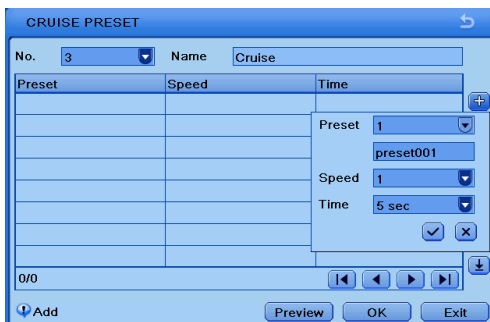

Fig 4-39 Modifying Cruise Line

To set up track:

- ① In the Advanced interface, click track “Setting” button to see a dialog box as Fig 4-40.
- ② Control the dome by rotating up, up left, down, right down, left, left down, right and up right and adjust the rotate speed and the value of zoom, focus and iris of the dome.
- ③ Click Start Record button to record the move track of PTZ. Click this button again to stop record.
- ④ Click Start track button to play recorded track. Click this button again to stop playing.
- ⑤ Click  icon to exit the current interface.
- ⑥ After the completion of settings, please remember to click “Apply” to save the setting.

Fig 4-40 Track Setting

4.9 Advanced

Advanced configuration includes three submenus: reset, import/export and Block/Allow list.

4.9.1 Reset

Reset the device to factory default settings.

4.9.2 Import/Export

User can export the data files into mobile storage devices as backup function, and then import specified data files from mobile storage device to DVR.

4.9.3 Block/Allow List

Here authorized user can prohibit computer users within a certain IP address range from accessing to DVR or allow computer users within a certain IP address range to access DVR. E.g. if an admin user doesn't want computer users within IP address range from 192.168.000.002 to 192.168.000.004 to access the DVR, he can check Block list option, and then input such IP address range. If it is required that computer users within a certain IP address range access DVR, they can check Allow List option and then do the required setting.

Fig 4-41 Block/Allow List

5 Search, Playback & Backup

Search configuration includes four submenus: time search, event search, file management and image.

5.1 Time Search

- ① Go to Main Menu → Search → Time Search. Refer to Fig 5-1.

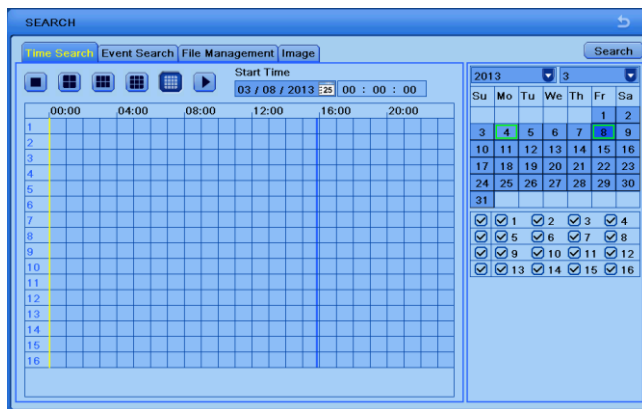

Fig 5-1 Search Configuration-Time Search

- ② Select date and channels on the right hand side and press the ‘Search’ button. A date with highlighted borderline indicates presence of data.
- ③ Set the start time by clicking a particular grid or by entering the specific value in the start time field.
- ④ Select the channel display mode and click Play  button to play record. Use the playback toolbar to control the playback.

- To set backup during a certain period in the playback interface:
 Select the start time by dragging the slider and click  icon. Then select the end time and click this icon again to confirm the record period. Next, click  icon to backup the record during this period.

5.2 Event Search

- ① Go to Main Menu→Search→Event Search button. Refer to Fig 5-2.

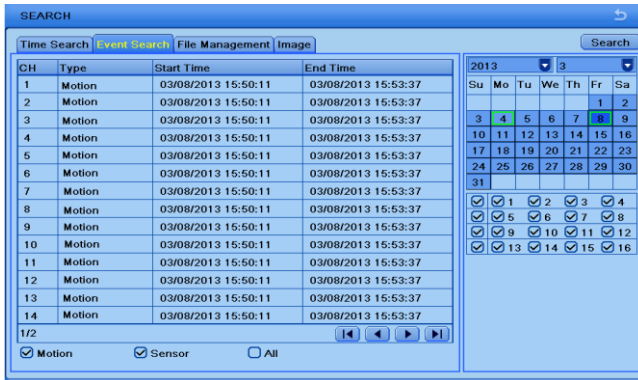

Fig 5-2 Search Configuration-Event Search

- ② Select date and channels on the right hand side. A data with highlighted borderline indicates presence of data.
- ③ Checkmark Motion, Sensor or All accordingly.
- ④ Click Search button to display the searched event information in the event list box.
- ⑤ Double check a certain record file to playback.

5.3 File Management

- ① Go to Main Menu→Search→File Management interface. Refer to Fig 5-3.

Fig 5-3 Search Configuration-File Management

- ② Select date and channels. The date with highlighted borderline indicates presence of data.

- ③ Click “Search” button to display the searched files in the file list box.
- ④ Use “All” button to lock/unlock or delete all files in the file management column.
- ⑤ Double click an unlocked item to play.

Lock: Select a file and click Lock button to lock this file, after that, that file will not be deleted or covered.

Unlock: Select a locked file and click “Lock” button to unlock this file.

Delete: Select an unlocked file and click “Delete” button to delete this file.

5.4 Search by Image

- ① Go to Main Menu → Search → Image tab.
- ② Select data and channels on the right hand side.
- ③ Press “Search” button to search for a recorded image.
- ④ Once an alarm image has been identified, the user can double click the image to play recording.

Fig 5-4 Search Configuration-Image

Lock: Select the image and click “Lock” button to lock this image.

Save: Click “Save” button to copy the image on the HDD.

Save All: Click “Save All” button to copy all images on the HDD.

5.5 Backup

This unit supports backup by USB Flash. You can also make backup by IE browser via internet (see section 7.5.2 Remote backup).

- ① Go to backup configuration. Refer to Fig 5-5.
- ② Set the start & end time, select channels and click Search button to display the searched data in the data backup list box.

Fig 5-5 Backup Configuration

- ③ Select a required file or checkmark “All” to select all data files. Click Backup button to display Backup information window.

- ④ In the backup information interface, you can check the relevant information of backup files, storage type, save file type, etc. Then click Start button to start backup.

Note: If the backup files are saved in DVR format, please check backup player. Only this player can play these files in DVR format. If the backup files are saved in AVI format, you can play these files with common media player.

6 Manage DVR

6.1 Check System Information

Check system information includes seven submenus: system, event, log, network, online users, record and QRCODE.

6.1.1 System Information

In this interface, you can check the hardware version, MCU version, kernel version, device ID, etc.

6.1.2 Event Information

In this interface, you can search for events like motion, sensor and video loss. The utility provides an interface to have a date based and a channel based search. This report can further be saved on a USB flash drive as an html file using the export button.

6.1.3 Log Information

In this interface, you can search for relevant logs as per set date and event which includes Operation, Setup, Playback, Backup, Search, Check Information and Error. This report can further be saved on a USB flash drive as an html file using the export button.

6.1.4 Network Information

In this interface, you can check relevant parameters of network.

6.1.5 Online Information

In this interface, you can check the details of the connected online users.

Refresh: Refresh the current interface.

Disconnect: Disconnect the online users to access DVR. If this function is used by the admin, the particular PC will not be able to access the device for five minutes.

6.1.6 Record Information

In this interface, a user can check resolution, ftp and record status including sensor alarm recording, motion recording, manual recording or schedule recording.

6.1.7 QRCODE

In this interface, user can quickly access the mobile client by scanning QRCODE.

- ① Go to Main Menu→Information→QRCODE tab.
- ② Scan the QRCODE through the mobile phone.

6.2 Manual Alarm

In this interface, you can trigger a manual alarm.

6.3 Disk Management

To format the disk

- ① Go to disk management interface.

Note: please format the hard disk before record.

- ② Click Refresh button to refresh the disk information in the list box.
- ③ Select a hard disk and click Format button to start format.

Note: All recorded files in the hard disk will be lost after formatting.

To check other information of disk

After you go to Disk Management→Advanced tab, you can check model, S/N, firmware, health status of the disk in this interface. You also can monitor the temperature, internal circuit, dielectric material of the disk, analysis the potential problems of the disk and warn so as to protect its data.

6.4 Upgrade

At present, it only supports USB update. Get the software from your vendor when there is a new software version.

The upgrade steps are as follows:

- ① Copy the upgrade software which gets from vendor into the USB storage device.
- ② Connect the USB flash drive to the USB port.
- ③ Go to Main Menu→Upgrade tab. You will see the upgrade software name displaying in the upgrade list box.
- ④ Select that software and then click Upgrade button. The system will be upgraded automatically.

Note: Please wait for a while when the system reboots. Any power interruption is not allowed during upgrading.

6.5 Logoff

A log off dialogue box will pop up by clicking Log off icon. Then click OK button to confirm to log off. If you want to log in again, click menu icon to enter user name and password to re-login.

7 Remote Surveillance

7.1 IE Remote Surveillance by NAT

7.1.1 NAT Settings

- ① The DVR shall be powered on and connected to the network.
- ② Go to Main Menu→Setup→Network. You can obtain the IP address, Subnet Mask and Gateway automatically. You can also manually input them according to the actual network situation. And the IP address shall be in the same network segment as the network which is used.
- ③ Set the preferred or alternative DNS Server (Please refer to 4.6.1 Network for details).
- ④ Go to Main Menu→Setup→Network→NAT tab.
- ⑤ Enable NAT and input the NAT Server (The default NAT Server is www.autonat.com).
- ⑥ Click “Apply” to save the parameters (Please refer to 4.6.5 NAT for details).

7.1.2 NAT Access

After finishing the NAT settings, you can enter the NAT Server on the remote PC (Input <http://www.autonat.com> to go to the IE client). If you are the first time to access the NAT, the network will download the ActiveX automatically.

Note: If you cannot download and install ActiveX, please refer to FAQ Q8.

After installing ActiveX successfully, it will pop up the login box.

Serial No	<input type="text" value="0018AE223355"/>
User Name	<input type="text" value="admin"/>
Password	<input type="password"/>
Language	<input type="text" value="English"/>
<input type="button" value="LOGIN"/>	

Serial No: The MAC address of the DVR (Go to Main Menu→Information→Network to check the MAC address of the DVR).

User Name: The login username of DVR. The default username is **admin**.

Password: The login password of DVR. The default password is **123456**.

7.2 IE Remote Surveillance via LAN & WAN

In order to view the DVR from a network it may be connected to a LAN/WAN or internet. The network setup should be done accordingly. Please refer to 4.6 Network Setup.

7.2.1 Via LAN

- ① Go to the DVR's Main Menu→Setup→Network interface to input IP address, Subnet Mask, etc. If using DHCP, please enable DHCP in both the DVR and the router.
- ② Enter Record Setup to set network video parameters like resolution, frame rate etc.
- ③ Open IE on a computer on the same network. Input the IP address of the DVR in IE address bar and press enter.
- ④ IE will download ActiveX component automatically. Enter the username and password in the subsequent window.

***Notice:** If HTTP port is not 80, add the port number after IP address. For example, set HTTP port as 82, input IP address like 192.168.0.25:82. User name and password here are the same with that used on the DVR. The default user name is **admin** and the default password is **123456**.*

7.2.2 Via WAN

There are two ways for the DVR to connect to internet.

1. Connect the DVR to internet through router or virtual server

- ① Go to the DVR's Main Menu→Setup→Network interface to input IP address, Subnet Mask, etc. If using DHCP, please enable DHCP in both the DVR and router.
- ② Forward IP address and port number in Virtual Server setup of the router or virtual server. Configure the firewall to allow accessing the DVR (If the user has enabled the UPnP function in both the DVR and router, he can skip this step.)
- ③ If users want to utilize dynamic domain name, please apply for a domain name in a DNS server supported by the DVR or router. Then add to the DVR or router.
- ④ Open IE browser, input IP address, or dynamic domain name and enter. If HTTP port is not 80, add the port number after IP address or domain name.
- ⑤ IE will download ActiveX automatically. Then a window pops up and asks for user name and password. Input name and password correctly, and enter to view.

***Note:** If you cannot download and install ActiveX, please refer to FAQ Q8.*

2. Connect the DVR to internet directly

- ① Go to the DVR's Main Menu→Setup→Network interface to enable PPPoE and then enter user name and password received from your ISP. Next, click "Apply". The DVR will connect to the server and would give a confirmation message.
- ② When accessing the remote interface of DVR, user can input WAN IP to access directly

(user can go to Main Menu→Information→Network interface to check IP address). The browser will download Active X control.

- ③ The following setting steps are as the same as ④ and ⑤ in Point 1.

7.3 Remote Surveillance through Apple PC

Note: Because the current plug-in version of client end just only supports 32-bit mode, so the safari browser shall start 32-bit mode. If the browser is the earlier MACOS version, the default setting is 32-bit mode and the setting can be skipped.

The setting steps are as follows:

- ① Right click safari icon and select “Show in Finder”.
- ② Select Applications→Right click “Safari. App”→Select “Get Info”.

- ③ Select “Open in 32- bit mode”.

7.3.1 Via LAN

- ① After starting Apple computer, click Apple icon. The following window will pop up. Please select “System Preferences”→ “Internet & Wireless”→ “Network”.
- ② Go to Network interface and then click “Ethernet Connected” to check the internet connection of Apple PC.

- ③ After acquiring the IP address, Subnet Mask and so on, please go to the DVR's Main Menu→Setup→Network interface to manually input IP address, Subnet Mask and Gateway according to the configuration of PC. The network segment should be the same as the PC. If using DHCP, please enable DHCP in the DVR and router.
- ④ After the above information is completed, you can enter LAN IP and HTTP port in the Safari browser. For example: input `http://192.168.1.100:81` (here 192.168.1.100 is LAN IP of DVR, 81 is the HTTP port of DVR), and click “” button. Then the browser will download ActiveX control as shown below.

- ⑤ Click  icon and then select the Active X control, the welcome interface will be shown. Click “Continue”→“Install” button, the following window will pop up.

Input the name and password of Apple PC and then click “OK” to install this Active X control.

- ⑥ After finishing installing the Active X control, please quit from the Safari browser. Right click Safari icon on the desktop and then select “Quit” button to quit the browser. Then restart Safari browser. Input the IP address and HTTP port to go to the login interface of DVR.

7.3.2 Via WAN

There are also two ways for DVR to connect to Internet.

1. Connect the DVR to internet through router or virtual server.

- ① The network setups are the same as step one to step four of point 1 on WAN of IE remote surveillance.
- ② Enter WAN IP and HTTP port in the Safari browser to install the Active control. The concrete steps are the same as ⑤ and ⑥ of Chapter 7.3.1.

2. Connect the DVR to internet directly.

- ① The network setups are the same as step one of point 2 on WAN of IE remote surveillance.
- ② Enter WAN IP and HTTP port in the Safari browser to install the Active control. The concrete steps are the same as ⑤ and ⑥ of Chapter 7.3.1.

7.4 The Remote Live Preview

Fig 7-1 Remote Live Preview Interface

Symbol and function definitions:

1	Channel indicator	2	Screen display mode
3	Volume	4	Start recording
5	Snapping picture	6	Bidirectional talk
7	Start IE record	8	Playback
9	PTZ control	10	Color
11	Master/sub stream status		

Note: Click  button to start recording. The record file will be saved in user's PC.

Screen display mode:

Click the  icon beside the screen display mode to select channels.

A maximum of 16 channels can be selected. Then click OK button to confirm the setting.

Snap pictures

Click “Snap”  icon to automatically capture pictures and save those pictures in the computer.

You can set up the save path for those picture in the Remote Preview interface → Configuration → Local configuration.

Color adjustment:

Drag the slide bar to adjust Brightness, Contrast, Hue, and Saturation. Click Default to reset them to original value.

Buttons	Description
	Drag the scroll bar to adjust the brightness of channel
	Drag the scroll bar to adjust the contrast of channel
	Drag the scroll bar to adjust the saturation of channel
	Drag the scroll bar to adjust the hue of channel
	Click this button to recover the default value of brightness, contrast, saturation and hue.
	Save the adjustment

PTZ control

Please connect speed dome to the device via RS485 firstly, make sure the protocol of the speed dome is supported by the device and set the relative parameters manually. User can control the dome up, down, right, left or stop rotating on Control Center, adjust rotation speed, Iris and zoom, focus on the dome, and set the presets, etc.

Buttons definition:Buttons	Description
	<ul style="list-style-type: none">  to rotate the dome upwards.  to rotate the dome diagonally up-left.  to rotate the dome diagonally up-right  to rotate the dome downwards.  to rotate the dome diagonally down-left  to rotate the dome diagonally down-right  to rotate the dome towards left.  to rotate the dome towards right  to stop rotating the dome.
	Drag the scroll bar to adjust rotating speed of the dome.
	'Iris' button. Click  button near 'Iris' button to increase light of the dome. Click  button near 'Iris' button to decrease light of the dome.

	'Zoom' button. Click button near 'Zoom' button to zoom in the locale picture of this camera. Click button near 'Zoom' button to zoom out the locale picture of this camera.
	'Focus' button. Click button near 'Focus' button to have long focus. Click button near 'Focus' button to have short focus.
	Go to the Preset
	Select and do auto cruise
	Track
	Auto scan
	Wiper button
	Light button

Click the right mouse on the live interface. This will take you to a pull-down menu.

Fig 7-2 Right Key Sub Menu

Stream: This DVR supports master stream and sub stream. Master stream has higher frame rate, max 25FPS (PAL) /30 FPS (NTSC) for every channel, but it needs higher network bandwidth simultaneously. Sub stream has low frame rate, max 6FPS (PAL) / 7FPS(NTSC) for every channel, it requires low network bandwidth. Therefore, you can select the stream according to your bandwidth.

All to master/sub stream: Set all channel to master stream or sub stream.

Enable audio: Enable or disenable audio.

Full screen: In full screen status, the live preview picture will display with full screen and the tool bar will be hid. Double click left mouse or click right mouse to return.

Zoom in: Single channel large screen electronic amplification. Click the channel which needs to be zoomed. Right click to select zoom in button to zoom in the image. Double click or right click to exit.

7.5 Remote Playback & Backup

7.5.1 Remote Playback

Click  button to go to record playback interface. Refer to Fig 7-3.

Select the record date and channels and double-click the file name in the record file list box. Then you can play that file and preview the picture.

Fig 7-3 Play Record File Interface

This DVR supports remote time search, event search and file management.

By Time Search:

- Go to Search→Time Search. Refer to Fig 7-4.

Fig 7-4 Time Search Interface

- ② The highlight date in the area ② indicates recorded data. Select the date in area ② and record channels in area ③.
- ③ Click “Search” button. The record data will be displayed in the data information list box.
- ④ Set the data playing time and display mode in the area ① as required.
- ⑤ Click “Play” button to playback.
- ⑥ Click the relevant buttons in the interface for operation, like FF, pause, change channel mode, etc. Refer to Fig 7-5.

Fig 7-5 Time Search Playback

By Event Search:

- ① Go to Search→Event Search interface. Refer to Fig 7-6.

Motion
 Sensor

Fig 7-6 Event Search Interface

- ② Click the highlight date and select record channels.
- ③ Checkmark the event type: motion and sensor.
- ④ Click “Search” button.
- ⑤ Double-click certain item to play.

File Management

- ① Go to Search→File Management interface. Refer to Fig 7-7.

Fig 7-7 File Management Interface

- ② Select highlighted date and channels.
- ③ Click “Search” button to search the recorded files.

Lock: Select certain file item in the file list box and then click “Lock” button to lock this file that can not be deleted or overlaid.

Unlock: Select a locked file and then click “Unlock” button to unlock this file.

Delete: Select an unlock file and then click “Delete” button to delete this file from file list.

7.5.2 Remote Backup

Click “Backup” button to go to backup interface. Please refer to Fig 7-8.

- ① Select channels, set the start and end time and then click “search” button to display the file information in the file list box.
- ② Select backup files and click “Browse” button to set the save path. Then click “Backup” button to start backup. The backup files will be saved on user’s PC.

Fig 7-8 Remote Backup Interface

7.6 Remote System Configuration

You can do remote setup of the device which includes functions like basic configuration, live configuration, record configuration, schedule configuration, alarm configuration, network configuration, PTZ configuration and user configuration. You should select an option from the menu list on the left and then set up the relative parameters. Only one user can do configuration setup at a given point of time. Click Config tab to go to the below interface.

The sub menu list and the options in every menu are similar to that of the DVR. Please refer to Chapter 4 Main Menu Setup Guide for more details.

Fig 7-9 Remote Menu Setup

7.7 Tools

Click on the tool's tab to access the Disk Management tool. The user can view the status of

the hard drive(s), can view/change the read write properties and can also format the hard drive(s).

7.8 Remote Management

The Info interface provides a web based interface to access the general information pertaining to the DVR's settings. The interface includes five submenus: System, Event, Log, Network and Online users.

***Note:** There may be subtle differences with respect to functions of remote surveillance between through IE and through Apple PC. Here we only take IE remote access for example.*

Appendix A FAQ

Q1. Why the DVR doesn't turn on after connecting to the power?

- a. The power adapter could have gone bad. Please change a new power adapter.
- b. The power from the adapter may be not enough for operating the DVR. Please use the power adaptor supplied along with the DVR.
- c. It could be a hardware problem.

Q2. There is not menu displayed and only has live image display.

- a. Check whether the monitor is connected to the main video out and not the spot out. The monitor might be connected to VGA port whereas the DVR may be set for output through BNC or vice versa. Long press ESC key to toggle the output modes.

Q3. The DVR LED turns on, however there is no output.

- a. The power from the adapter may be not enough for operating the DVR. Please use the power adaptor supplied along with the DVR.
- b. It could be a wiring issue. Please check the connection for the same.
- c. Check the monitor settings.

Q4. Why are there no images displayed on few or all channels of the DVR?

- a. It could be a wiring issue. Please check the cable and the ports of the cameras and DVR.
- b. The problem can also be related to cameras. Please check the same.
- c. Please make sure that the channels are not programmed as hidden channels and check the status from admin login.

Q5. The HDD cannot be found.

- a. The power from the adapter may be not enough for operating the DVR. Please use the power adaptor supplied along with the DVR.
- b. It could be wiring issue. Please check the power and data cables of the HDD.
- c. The HDD could have gone bad. Change a new one.

Q6. The DVR cannot record.

- a. Make sure the HDD was formatted prior to use.
- b. Maybe the user hasn't enabled the record function or has done incorrect setup. Please refer to Chapter 5.
- c. Maybe HDD is full and thus the DVR is not able to record. Check HDD information from Disk Management and if required, please enable the recycle function.
- d. The HDD could have gone bad. Please change another one.

Q7. Mouse doesn't work.

- a. The mouse should be connected to the USB port at the rear side.
- b. After connecting the mouse, allow the DVR to detect the mouse for seconds. If not detected,

try restarting the DVR.

c. The mouse may be incompatible. Please change a mouse.

Q8. ActiveX control cannot be downloaded.

a. IE browser blocks ActiveX. Please do setup as per the steps mentioned below.

① Open IE browser. Click Tools→Internet Options.

② Select Security→Custom Level. Refer to Fig 8-1.

③ Enable all the sub options under “ActiveX controls and plug-ins”. Refer to Fig 8-2. Then click Ok to finish setup.

b. Other plug-ins or anti-virus blocks ActiveX. Please uninstall or do the required settings.

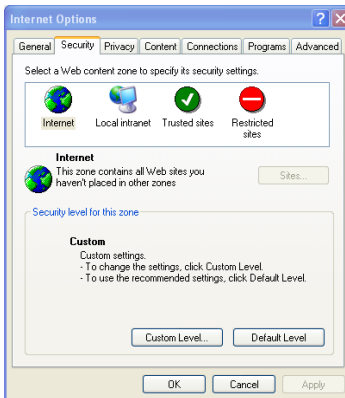

Fig 8-1

Fig 8-2

Q9: DVR displays “please wait...”all the time.

a. HDD power cable and data cable may not be well connected. Please check the connections for HDD.

b. It is also possible that the DVR was forced to stop because HDD has a bad sector and it may have caused the system to halt. Check with a good known HDD or try formatting the existing HDD.

Q10: How to input password and digital numbers?

Click the password or the input box a small keyboard will pop up. Please select characters to be input (the initial password is 123456), or you can use the digital keys on the front panel, or the digital keys on the remote controller.

Q11: A hard disk is being identified as a new device however it was being used with another DVR of same model. Should it be formatted prior use?

It is possible to migrate an HDD from one DVR to another provided that the DVRs are of the same model and that the HDD being migrated would be used as the sole disk in the new DVR. However in cases where the new DVR already contains a HDD, the migrated disk being installed would have to be formatted. In general migrating disks from one DVR to another is not recommended.

Q12: What is the minimum configuration required for remote monitoring?

PC Module	Parameters
CPU	Intel Celeron 2.4G
Motherboard	Intel 845
HDD	80G
RAM	512M
VGA	NVIDIA GeForce MX440/FX5200 ATIRADEON 7500/X300
OS	Windows 2000(SP4 above) /Windows XP(SP2 above) /VISTA
DirectX	9.0

Q13: How to handle the situation that the codec Control is blocked when downloading in the VISTA or Win7 system?

This problem can be fixed in two ways:

- a. Enter Control Panel → User Account and Family Safety → User Account Control (refer to the following figure) and click Turn User Account on or off. Cancel Use User Account Control (UAC) to help protect your computer.

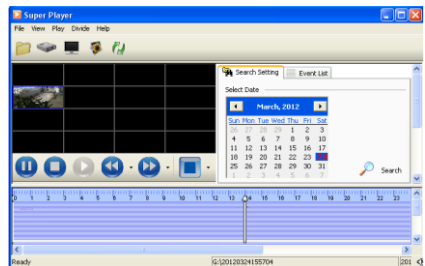

- b. Right click IE browser (refer to the following figure) and select Run as administrator to run browser.

Q14. How to play the backup file?

Insert your USB device where the backup files are saved in the USB port of PC. If your files are saved in DVR format, you must have already downloaded the backup player box before doing backup. Then double click to open your USB disk to find your backup files and backup

player. Double click  icon to install backup player. After you install it, open this player and click “Open Path” button to open your backup file. Next, click  play button to play the backup file. Double click the image and then right click to enable audio. If you save your backup files in AVI format, you can directly open your file by using the media player which supports this format.

Appendix B Calculate Recording Capacity

Users can calculate the size of hard disk according to the saving time and DVR recording settings. The DVR uses fixed video bit rate. The below are the details at different settings.

Resolution	Frame Rate (FPS)	Video Quality	Bitrate (kbps)	Used Space (MB/H)
WD1	15(NTSC) /12(PAL)	Highest	2.5M	563
		Higher	2M	450
		Medium	1.5M	338
		Lower	1M	225
		Low	768	169
D1	30(NTSC) /25(PAL)	Highest	2M	900
		Higher	1.5M	675
		Medium	1M	450
		Lower	768	338
		Low	512	225

The calculation format is: **Total Recording capacity =Used space per hour (MB/h) (coverage rate of hard disk) × recording time (hour) × channel numbers**

For instance, one customer uses NTSC cameras, set resolution to D1, video quality to Low, frame rate to 30 fps for enabling total 4 channels. Below is the calculation to record continuously for a month.:

$$\text{Total Recording capacity} = 225 \text{ (mb/h)} \times 24 \text{ (hours/day)} \times 30 \text{ (days)} \times 4 \text{ (channels)} = 648000 \text{ (MB)} \approx 633 \text{ (GB)}$$

Therefore, customers just install one SATA HDD with 1000GB for one month recording.

Appendix C Compatible Devices

1. Compatible USB drive after test.

Brand	Capacity
SSK	2GB
Netac	4GB
Kingston	2GB/8GB/16GB/32GB
Aigo	2GB
Smatter vider	1GB
SanDisk	4GB/8GB/16GB/32GB

2. Compatible HDD list.

Brand	Capacity
Seagate Barracuda	80G/160G/250G/320G/1.5T/2TB/3TB
Seagate SV35.3	1T
Seagate Pipeline HD.2	500G
Maxtor Diamondmax	160G
HITACHI Deskstar	80G/160G
Western Digital	160G/250G/320G/1.5T/2TB/3TB
Samsung HD161HJ	160G

Appendix D 4-CH DVR Specifications

Compression Format	H.264 Main Profile
Video Output	BNC × 2, VGA × 1, HDMI × 1
Video Input	BNC × 4
HDMI/VGA Resolution	1920 × 1080 / 1280 × 1024 / 800 × 600
Record Resolution	960 × 576 / 704 × 576 / 352 × 288 (PAL), 960 × 480 / 704 × 480 / 352 × 240 (NTSC)
Display Frame Rate	100FPS (PAL), 120FPS (NTSC)
Record Frame Rate	100FPS (PAL), 120FPS (NTSC)
Audio Input	RCA × 4
Audio Output	RCA × 1
Alarm Input	NO or NC 4CH
Alarm Output	1CH
Record Mode	Manual / Sensor / Timer / Motion detection
Simplex/Duplex/Triplex	Pentaplex
Network Interface	RJ45 (LAN, INTERNET)
PTZ Control	YES
Communication Interface	RS485, USB2.0 × 2 (one for backup, another for USB mouse)
Disk Info	SATA × 1
Remote Controller	YES
Power Supply	DC12V
Power Consumption	< 5W(without HDD)
Temperature	0°C-50°C
Humidity	10%-90%

Appendix E 8-CH DVR Specifications

Compression Format	H.264 Main Profile
Video Output	BNC × 2, VGA × 1, HDMI × 1
Video Input	BNC × 8
HDMI/VGA Resolution	1920 × 1080 / 1280 × 1024 / 800 × 600
Record Resolution	960 × 576 / 704 × 576 / 352 × 288 (PAL), 960 × 480 / 704 × 480 / 352 × 240 (NTSC)
Display Frame Rate	200FPS (PAL), 240FPS (NTSC)
Record Frame Rate	100/200/200FPS (PAL), 120/240/240FPS (NTSC)
Audio Input	RCA × 4
Audio Output	RCA × 1
Alarm Input	NO or NC 8CH
Alarm Output	1CH
Record Mode	Manual / Sensor / Timer / Motion detection
Simplex/Duplex/Triplex	Pentaplex
